DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 39 to 45, drawn to a remote system including a transceiver operable to scan speech input for a keyword at a local device and to forward if the keyword was detected, and a processing component operable to recognize words in the speech input, classified in class 704, subclass 251.
 - II. Claims 46 to 49, drawn to a remote network including a transceiver operable to receive speech input at a local device, the local device operable to perform a first level of speech recognition, and a processing facility having a plurality of distributed processing units operable to perform a second level of speech recognition, classified in class 704, subclass 255.
 - III. Claims 50 to 54, drawn to a method of scanning speech input at a local device for a keyword, initiating a connection between the local device and a remote system when the keyword is detected, and passing the speech input to the remote system for interpretation, classified in class 704, subclass 270.1.
 - IV. Claims 55 to 58, drawn to a method of scanning speech input at a local device for a keyword, initiating a connection between the local device and

a remote system when the keyword is detect, storing a portion of the speech input into a memory, and transmitting the stored portion of the speech input to a remote system, classified in class 704, subclass 275.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as in an automated web browser utilizing VXML for speech recognition e-commerce services. See MPEP § 806.05(d).
3. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as in a speech recognition system having context dependent vocabularies for a plurality of subjects stored at a plurality of database locations. See MPEP § 806.05(d).
4. Inventions III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as in a remote dictation system or a remote language translation server. See MPEP § 806.05(d).
5. Inventions IV and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention IV has separate utility

such as in an Internet telephone system with voice dialing utilizing buffering to reduce latency. See MPEP § 806.05(d).

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

7. Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
